DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities:

In line 6 of claim 1 after the word "signal" replace the variable "a" with the symbol -- α --.

In line 6 of claim 1 after the "(" replace the variable "a" with the symbol -- α --.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 11, and 14 are indefinite because it is not clear to the examiner how the time difference expander is connected to the rest of the circuit. Does the time difference expander receive the first signal and the second signal or does it receive the delayed first and second signal? It appears to the examiner from the drawings and the specification that the time difference expander receives a first signal that has been delayed by the first and second circuit (for example as shown in Figure 5). There does not appear to be a second signal shown in the figure and therefore, it is not clear to the examiner how the time difference expander would expand a time difference between a changeover point of a first signal and a changeover point of a second signal a particular

number of times to provide an output signal having a given time difference with respect to a control signal. There is also no control signal shown in the Figure. In addition applicant discloses in the specification that figures 11-19 show different embodiments of the time difference expander (3) shown in previous Figures. It is not clear to the examiner how the time difference expander shown in Figures 11-19 correlates to the time difference expander (3) shown in the previous Figures. For example the time difference expander shown in Figure 4-10 shows a circuit having a single input and a single output. This does not correspond to Figures 11-19 wherein the time difference expander has multiple inputs and outputs. Correction or clarification is required.

Claims 2-10 and 15-16 are also rejected due to the limitations of the base claims and any intervening claims.
